Installation of Software

Go to www.realforce.co.jp to download software for the setup
of LED color and APC function (adjust the ON position).
Execute and install by following the instructions.

⬇ www.realforce.co.jp

*1 ⋯ To adjust the brightness of an official Apple
     display that connects to a Mac Pro or Mac mini,
     use the F14 (dark) and F15 (bright) keys instead
     of the F1 and F2 keys.
*2 ⋯ Works by pressing the [Fn] Key.
*3 ⋯ Only available on keyboards with APC function.

The initial setup of Mission Control [F3] and Launch-
pad [F4] are not functionable. But, it can be used in
the Mac OS environment. Refer to the instruction
manual for the setting method.

Specification of Keyboard in Windows Mode

*Keys without indications function as per printing on key.
